R²

Best model so far: ridge regression on 32 principal components of the OSTIA-filled Granite embedding + in-situ temperature (median pooled R² 0.34 on the 20-KO benchmark and 0.12 over all 3,921 KOs, cruise held out; RESULTS.md R12, R17).
The heatmap compares the embedding alone (ridge), temperature alone (spline), time & place (latitude, longitude, day of year; ridge) and the raw satellite values (16 OLCI band means + SST mean of the tile, rank-normalised; spline).
